

OPHORA™ EFFERVESCENCE SPARKLING WATER STATION

Identified at the 2018 Berkeley Springs International Water Tasting as the best purified drinking water in the world; Ophora now offers a sparkling alternative to still water.

If you enjoy a bubbly beverage that retains the same health benefits of our nano-purified, restructured water, you'll love our new Effervescence Sparkling Water Station.

Conveniently engineered into a manageable sized, counter-top appliance, now you can enjoy Ophora sparkling water in your home.

This self-serve system, in addition to producing chilled sparkling water, offers still room-temperature, and still hot water.

Our exclusive under-the-counter water polishing system (paired with the Effervescence) represents a guaranteed methodology for removing known contaminants including difficult-to-remove pesticides, pharmaceuticals, and trace hormones.

Effervescence benefits:

- Produces a never-ending supply of pure, restructured, effervescent sparkling water
- Nano-filtered down to 0.0001 microns, richly remineralized and naturally alkalized to pH 8.0
- Green technology that exceeds all water efficiency standards
- Totally self-contained. This self-serve unit can be positioned on a counter-top with room for the support equipment underneath
- No required monthly maintenance; only one simple filter change out per year
- Size: 9" w x 16" d x 15 5/8" h
