

OPHORA™

BIO-FRESH POOL AND SPA

The Ophora Bio-Fresh organic pool and spa purification system is like nothing you have ever experienced. It is not your typical salt-water sanitation system, which, despite what proponents say, is nothing more than a chlorine enhanced system. Nor is it an ion copper or other alternative based system that requires ongoing chlorine shock treatments. In fact, leading M.D. Andrew Weil declared that, "chlorine used to disinfect swimming pools [and spas] is widely recognized as a health hazard."

Our Bio-Fresh systems is time tested & proven technology stemming from forty years of experience in alternative pool and spa purification. These systems use a powerful combination of high output ultraviolet sterilization, high production ozone oxidation, and our oxidizer of 35% food grade hydrogen peroxide (H₂O₂).

Our Bio-Fresh technology coupled with our proprietary Bio-Fresh H₂O₂ Activator Solution effortlessly and automatically keeps your pool or spa organically fresh, sanitized, and totally chlorine free.
